<b>Date of Publication</b>	Jun 17, 2025

### Clarification of News Report

This is in response to your request for clarification of the news article entitled, "ACEN unit secures approval for 943 MW wind project in Australia" posted in BusinessWorld (Online Edition) today, 17 June 2025. The article reported in part that:

"ACEN AUSTRALIA, a subsidiary of ACEN Corp., has secured approval from the Independent Planning Commission (IPC) of New South Wales for its planned 943-megawatt (MW) wind project with a 320-MW energy storage facility.

'The approval is a significant milestone for ACEN, as we progress development of our 13-gigawatt pipeline across Australia,' ACEN Australia said in a statement last week.

The IPC approval, dated June 11, includes conditions on water sourcing, soil and water management, and a decommissioning and rehabilitation plan.

The commission also addressed concerns raised by the community and stakeholders by setting conditions related to bushfire management and the continuation of aviation activities at nearby aerodromes.

'Given the fact the project is in a relatively early cohort of projects for the Central-West Orana Renewable Energy Zone (CWO REZ), the Commission finds its cumulative impacts with those of existing and approved projects to be acceptable,' it said.

....

The Valley of the Winds project will consist of up to 131 wind turbines and is expected to generate enough electricity to power about 500,000 homes annually.

....

In its application, ACEN Australia said the project involves an estimated capital investment of \$1.68 billion and is expected to generate up to 400 construction-related jobs and up to 50 operational roles.

'As we progress towards the construction stage, we remain committed to ongoing consultation and engagement with the community, local businesses, and project partners,' ACEN Australia said.

...."

The Company confirms the accuracy of the information reported in the above-captioned news article insofar as it reported the approval by the Independent Planning Commission (IPC) of New South Wales, Australia for ACEN Australia's planned Valley of the Winds project (wind energy project with an energy storage facility or the "Project") and subject to the following clarifications:

1. The Project is still in the development stage. Currently, ACEN Australia is in the process of undertaking and completing the required development and technical studies in relation to the Project.
2. The reported use of up to 131 wind turbines with 943MW of wind capacity, and reported 320MW of energy storage capacity, are preliminary at this point. The number of turbines (not to exceed 131) and the final wind and storage capacity of the Project will be firmed up as soon as the relevant technical and commercial studies are completed.
3. The capital investment of AUD\$1.68 BN is ACEN Australia's best estimate of the capital investment needed to develop and build the Project at the time when the original planning application was made back in February 2022. The final capital investment into the Project will be updated and is subject to the finalization of the size and specifications of the Project.

We will promptly advise the Exchange of any developments or relevant information as applicable.
