Attention: ATTY. SUZY CLAIRE R. SELLEZA
Head, Issuer Compliance and Disclosure Department

Subject: Clarification of News Article

Dear Atty. Selleza:

This is in reply to the correspondence by the Philippine Dealing and Exchange Corp. (the "Exchange") dated July 22, 2025, seeking confirmation with respect to accuracy of news relating to Converge Information and Communications Technology Solutions, Inc. ("CNVRG" or the "Company"). The Exchange cited a news article entitled "Converge's Caloocan data center gets Philippines first Tier 3 certification" posted in *The Philippine Star* on July 22, 2025, which reported in part that:

"MANILA, Philippines – Broadband provider Converge ICT Solutions Inc. has secured full certification as a Tier 3 facility for its Caloocan Data Center, the first time a Philippine facility has received such accreditation.

Converge yesterday said it has received certification from New York-based data center authority Uptime Institute for its three-megawatt, 300-rack Caloocan Data Center.

This makes the Caloocan Data Center the first and only data center in the Philippines to receive a Tier 3 certification.

In February, Converge scored a Tier 3 certification for Caloocan Data Center's design, affirming that the blueprint meets the redundancy demands of a facility of such rate. Since then, Converge has completed the construction of the facility, and the company is now testing its capabilities.

The Caloocan Data Center will house Converge's digital assets, making it a crucial component of the company's operations. The infrastructure is also one of the two data centers that Converge is building to prepare its network for future demand.

Converge CEO and co-founder Dennis Anthony Uy said the tech

provider is building up a network of assets that can meet the requirements of both its residential and enterprise clients”

The Company confirms the abovementioned information, as similarly published on our corporate website¹. Converge was previously awarded the Tier 3 Design Certification² last February 2025, with this recent update adding the certification for the Constructed Facility. According to Uptime Institute’s Tier Classifications³:

A Tier III data center is concurrently maintainable with redundant components as a key differentiator, with redundant distribution paths to serve the critical environment. Unlike Tier I and Tier II, these facilities require no shutdowns when equipment needs maintenance or replacement. The components of Tier III are added to Tier II components so that any part can be shut down without impacting IT operation.

We hope these clarify the matter. Please do not hesitate to contact us for further queries.

Very truly yours,

**CONVERGE INFORMATION AND
COMMUNICATIONS TECHNOLOGY
SOLUTIONS, INC.**
