Alternergy Holdings Corporation ("ALTER"), a Philippine pioneer in renewable power development, through its subsidiary Alabat Wind Power Corp. ("AWPC"), has completed the Philippines' first overhead sea-crossing transmission link built for a wind power project, establishing a critical connection between its 64-megawatt ("MW") Alabat Wind Project in Quezon Province and the Luzon mainland. Spanning 1.4 kilometers, the overhead crossing forms part of the project's 37-kilometer, 69-kilovolt ("kV") transmission line. The crossing required two 100-meter-tall and two 45-meter-tall lattice towers, providing the infrastructure needed to transfer electricity from Alabat island to the Luzon grid. This project marks ALTER's first inter-island transmission connection and demonstrates the company's capability to deliver complex energy infrastructure in challenging geographic and engineering conditions.

Please see attached Media Release document for details on the matter.

MEDIA RELEASE
27 October 2026

Alternergy completes Philippines' first sea-crossing transmission link for a wind power project

- Philippines' first sea-crossing transmission link for a wind power project
- Unique 1.4-kilometer overhead sea crossing from Alabat island to Luzon mainland
- Alternergy's first inter-island transmission connection
- Milestone advances the 64 MW Alabat Wind Power Project a step closer to delivering clean energy to Luzon

Alternergy Holdings Corporation (PSE: ALTER) a Philippine pioneer in renewable power development, through its subsidiary **Alabat Wind Power Corp. (AWPC)**, has completed the Philippines' first overhead sea-crossing transmission link built for a wind power project, establishing a critical connection between its 64-megawatt (MW) Alabat Wind Project in Quezon Province and the Luzon mainland.

Spanning 1.4 kilometers, the overhead crossing forms part of the project's 37-kilometer, 69-kilovolt (kV) transmission line. The crossing required two 100-meter-tall and two 45-meter-tall lattice towers, providing the infrastructure needed to transfer electricity from Alabat island to the Luzon grid.

This project marks Alternergy's first inter-island transmission connection and demonstrates the company's capability to deliver complex energy infrastructure in challenging geographic and engineering conditions.

"Developing a wind project on an island requires more than building the generating facility itself. It also means creating the infrastructure needed to deliver clean power to consumers," said Gerry Magbanua, president of Alternergy Holdings Corporation. "The Alabat sea crossing addresses that challenge and demonstrates our ability to deliver complex infrastructure that unlocks the potential of the country's renewable energy resources."

The transmission route links the wind farm on Alabat Island, which faces the Pacific Ocean, to a connection point along the National Grid Corporation of the Philippines' (NGCP) Gumaca–Lopez (Hondagua) 69-kV transmission line. The broader transmission infrastructure includes 483 poles spanning 37 kilometers.

"This milestone reflects the expertise and persistence of our project team and contractors, alongside the support of NGCP, the provincial government of Quezon, the municipalities of

alternergy

pioneer in renewable power

Alabat and Quezon, and our host communities. Their collaboration has been instrumental in bringing this challenging infrastructure to completion," Mr. Magbanua added.

The Alabat Wind Power Project consists of eight 8-MW wind turbines, the largest commercial wind turbines deployed outside China, supplied by Envision Energy and designed to withstand typhoons. It is the first wind farm in Quezon province and is among the first wind projects to be completed under the Department of Energy's second Green Energy Auction Program (GEAP 2).

The Alabat project, together with the 128-MW Tanay Wind Power Project in Rizal, is expected to lift Alternergy's operating capacity from 119 MW to about 311 MW by the end of 2026.

About Alternergy

• Alternergy is a renewable power pioneer with a portfolio of projects across multiple technologies, including onshore wind, run-of-river hydro, utility-scale and commercial rooftop solar, and battery energy storage.

• Alternergy is led by a seasoned management team of renewable energy pioneers headed by former Energy Secretary Vince Pérez and President Gerry Magbanua.

• Alternergy ("ALTER") debuted on the Philippine Stock Exchange in March 2023. In August 2024, ALTER was included in the PSE Industrial Index. In December 2024, the company declared its first dividend payments to preferred shareholders, including the Government Service Insurance System (GSIS).

• Alternergy has four projects commencing commercial operations by 2026: the 4.6 MW Dupinga run-of-river hydro Plant, the 28 MW Balsik Solana Solar Plant, the 64 MW Alabat Wind and 128 MW Tanay Wind projects.

•In September 2026, Alternergy had its maiden public debt issue of P2 Billion Enrolled Green Corporate Notes.

• Alternergy has received Certificates of Award from the DOE for its five projects with a combined capacity of up to 500 MW under the Green Energy Auction Program 4 (GEAP 4).

• With a robust project pipeline, Alternergy is heading towards its One Green Gigawatt target by 2030.
